

REDLAND PV INSTALLATION

ONE DAY

A step-by-step instruction on how to install Redland's InDaX PV System, with an opportunity for Q&A on system performance and technical detail.

Our roof system panels are unique in that they fit into the roof structure, making them both low profile and low visibility, working with the entire Redland roof system, rather than being a 'bolt-on' addition to the roof structure.

Popular with both contractors and clients, this course is ideal for those seeking to understand the benefits of roof integrated PV systems and gain a detailed knowledge of their installation on a new or existing roof space.

OVER THE COURSE OF THE DAY, YOU WILL:

- Gain a knowledge of the benefits of roof integrated PV systems
- Be brought up to date on any changes to the PV market
- Install Redland InDaX 250 PV panels as part of a Redland roof system
- Be introduced to Redland PV services such as EcoMaster – Redland's free-of-charge design and specification service for projects using renewable energy systems

“A fantastic product, I will not go back to installing on-top panels.”

J Frayer, Frayer Solar

DURATION

Held over one day, with a 10am start and an approximate 3pm finish. Teas, coffees and lunch provided.

TO BOOK
